Frontend & Full-Stack Developer | Data-Driven Web Applications

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Frontend & Full-Stack Developer who enjoys turning complex workflows and information-heavy problems into clear, intuitive web applications. Combines an engineering background with commercial freelance experience to build thoughtful, data-driven software that helps people make better decisions. Experienced in translating client needs into maintainable React and TypeScript interfaces, supported by Node.js, REST APIs and PostgreSQL, and collaborating through GitHub-based workflows.

Technical Toolkit

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Vite

Databases: PostgreSQL, Supabase, SQLite

Backend & APIs: Node.js, Express.js, REST APIs, serverless functions

Testing & Tools: Jest, Git, GitHub, Postman, Vercel, Render, VS Code

Selected Projects

First Step Jobs ([Code](#) | [Live Site](#))

April 2026

React, Node.js, Express.js, PostgreSQL, REST APIs, Jest

Decision-support platform that helps users evaluate and compare job opportunities by combining vacancies from multiple sources with personalised matching and realistic commute insights.

- * Designed a recommendation system that ranks job opportunities against user preferences, analysing keywords, salary, distance, recency and remote-working options across multiple APIs.
- * Engineered backend processing to merge, normalise and de-duplicate vacancy data, turning inconsistent API responses into cleaner, more useful search results.
- * Improved performance and reliability through request caching, backend-driven pagination and Jest tests covering job processing, distance and commute logic.
- * Created responsive search and saved-job workflows with commute calculations, travel-mode options, persistent preferences and clear loading states, helping users compare and revisit opportunities efficiently.

Film Finder ([Code](#) | [Live Site](#))

July 2026

JavaScript, TMDB API, Vercel Serverless Functions, LocalStorage

Recommendation tool designed to reduce decision fatigue by helping users discover films that match their mood, tastes and saved preferences.

- * Integrated the TMDB API using asynchronous JavaScript and Vercel serverless functions, separating API handling from the client and supporting structured film discovery.
- * Developed a recommendation scoring system that combines ratings, popularity, selected filters and user feedback to surface more relevant choices.
- * Designed filtering and release-period controls with LocalStorage persistence, helping users refine their search and return to previous discovery choices.

Mole Unearther ([Code](#) | [Live Site](#))

March 2026

JavaScript, Phaser 3, Node.js, Express.js, PostgreSQL, Supabase

Arcade game built to explore responsive gameplay systems, real-time feedback and persistent online competition through a live leaderboard.

- * Engineered interactive game systems in Phaser 3, including keyboard controls, timed rounds, real-time scoring, pause functionality and progressive difficulty.
- * Added combo streaks and responsive effects including particles, camera shake, screen flashes and sprite feedback to make gameplay more engaging.
- * Developed a Node.js and Express REST API for score submission and leaderboard retrieval, using PostgreSQL through Supabase for persistent storage and ranking logic.
- * Deployed the frontend and backend separately across GitHub Pages and Render, connecting both services to support the live leaderboard.

Professional Experience

Freelance Frontend Developer - Self-employed (Project)

June 2026

Collaborated with another developer to transform a complex client workflow into a React and TypeScript prototype, helping structure session content and reduce manual administration.

- * Mapped a detailed client brief into a clear multi-step journey covering template selection, session setup, consent, audio upload or recording, structured-output review, editable action plans, resource links and final preview screens.
- * Designed controlled forms and shared application state so information remained consistent across screens and changes flowed through the prototype.
- * Used simulated audio and transcription data to test the complete workflow honestly, validating the user experience without presenting the prototype as a finished AI transcription system.
- * Worked through GitHub Projects, issues, feature branches, pull requests and code reviews, using regular feedback to refine both the product and implementation.

Tech: React, TypeScript, Vite, Git, GitHub

People Coordinator - Adur & Worthing Councils

July 2023 - April 2025

- * Made complex employee restructuring work easier to track by collecting, validating and organising workforce data, working with Heads of Directorates, HR and Payroll to ensure changes were accurately documented and processed.
- * Built and maintained shared tracking spreadsheets and documentation for staffing changes, payroll codes and contractual updates, giving stakeholders reliable information for decision-making.
- * Calculated annual leave entitlements and final pay for leavers, investigating discrepancies and ensuring information submitted to Payroll was accurate and compliant with organisational policies.
- * Prepared monthly workforce reports while managing multiple concurrent priorities, developing planning methods that improved organisation and enabled urgent work to be balanced alongside day-to-day responsibilities.

Learning & Development Officer - Adur & Worthing Councils

September 2021 - July 2023

- * Maintained learning systems including Connect and Learning Pool, keeping training information accurate and helping employees navigate learning processes.
- * Coordinated training events across Council services, translating requirements between employees, facilitators and internal stakeholders to keep delivery organised.
- * Designed and delivered a series of cybersecurity training sessions, using interactive activities and quizzes to explain technical risks clearly and encourage participation.
- * Managed operational processes including purchase orders, invoices and training enquiries, balancing system administration with day-to-day user support.

Graduate Project Engineer - Nasmyth Group

September 2019 - February 2020

Supported engineering projects through technical documentation, cross-team coordination and factory acceptance testing, following structured procedures and recording outcomes for quality assurance.

Education & Training

Software Development Bootcamp - TechNative Digital

October 2025 - December 2025

- * Completed practical training in JavaScript, React and Git/GitHub, alongside independent study in Node.js and SQL.

Level 3 Learning & Development Practitioner - Pass

2021 - 2023

MEng Aerospace Engineering (Merit) - University of the West of England

September 2015 - June 2019

- * Received the Dean's Award.
- * Completed a dissertation developing a Model Predictive Controller for aircraft-wing flutter suppression using MATLAB and Simulink.
- * Relevant study included Systems Engineering, Control Systems and C programming.
